

ChlorKing® on-site Chlorine Generators

WHY BUY CHLORINE WHEN YOU CAN MAKE IT ON-SITE?

Are the constant increases in chlorine prices driving you crazy? Is storing and handling chlorine becoming more of a problem?

ChlorKing's® revolutionary on-site chlorine generators, designed specifically for commercial swimming pools produce all the chlorine your facility requires on-site. NO MESS, NO FUSS.

“This new line of on-site chlorine generators will change the way commercial pool operators look at sanitizing their swimming pools”.

Our range of X-GEN on-site chlorine generators produces 2,500ppm of equivalent chlorine in the production tank which is then distributed to the swimming pool as needed. Unlike our traditional saline chlorinators there is no need to add salt to the swimming pool, simply keep the salt in the saturated feeder and the X-GEN will do the rest.

2lb's of salt will produce 1lb of equivalent chlorine and because our X-GEN systems re-use the swimming pool water salt usage will go down over time.

Unlike alternative chlorine generators available on the market, the X-GEN system will never increase the TDS levels of your swimming pool above our set point.

If you're looking to make your facility “green” with environmentally friendly products, the X-GEN is a must for you, if you're worried about chlorine cost increases every year, this is your answer, and if you're fed up with the mess and danger of traditional chlorines, the X-GEN will solve your problems.

ChlorKing® offers a unique rental program where you pay monthly for the chlorine produced no need to outlay money for the purchase of the machinery, continue to pay as if you were buying chlorine....
